Chapter 1

General overview of the data management section of the HID web app

In order to be able to alter data, you need a user account with data maintenance privileges. Once you get a user account with data maintenance privileges and the url for your site's HID web app with data maintenance privileges from your administrator, you can login to the application (See Figure 1.1).

After login, you should see a welcome screen like in Figure 1.2 (Welcome screens are one of the candidates for site specific customization). At the header and footer of the screen you will see links to BIRN web site, NIH, NCRR and DHHS). Also in the header you will see the ID of the database you are currently connected.

The screen has a menu on the left-side of the screen for the application. For Experiment, study group maintenance and subject enrollment *Experiment* menu item is used. Pressing the magnifying glass icon brings you to the Experiment selection screen (See Figure 1.3, pressing the plus icon brings you to the new experiment addition screen (See Figure 1.4).

For subject , visit, segment and clinical assessment management *Subject* menu item is used. When you press the magnifying glass icon, you will see the *subject find/select* screen (See Figure 1.5), pressing the plus icon brings you to the subject addition screen (See Figure 1.8).

Also please note, there will be a change in the data hierarchy, namely addition of study between visit and a segment, which require the data maintenance described here to change in some parts. The tutorial will be updated when this change is implemented.

1.1 Experiment Management

1.1.1 Add a new experiment

To add a new experiment, press the plus button in the Experiment section of the left menu. In the new experiment screen, provide the mandatory experiment name, select the contact person from the available contacts dropdown, provide (optional) experiment description and press the *Add* button (See Figure 1.4).

1.1.2 Maintaining an existing experiment

First you click the magnifying glass icon in the Experiment section of the left menu, to go to the Experiment Selection screen in Figure 1.3. Then, doubleclick on the experiment name you want to maintain in the list of available experiments. You should see the experiment management screen (See Figure 1.9). In this screen you will see the subjects currently enrolled to the experiment including their study groups. Here you can enroll new subjects, change an enrolled subjects study group or add a new study group.

1.1.2.1 Adding a new study group

When you press *Add Study Group* button in the experiment management page, you will arrive to the *study group addition* screen as shown in Figure 1.6. Here you select the research group type from the dropdown list, provide the name of the new study group. Optionally, also provide a description and press the *Add* button when done.

1.1.2.2 Enrolling a new subject

To enroll a new subject, press the *Enroll* button. In the subject enrollment screen (see Figure 1.7), select the subject from the available subjects list, then select the study group the subject will be in and press *Enroll* button.

1.2 Subject/Visit/Segment Management

1.2.1 Adding a new subject

To add a new subject, press the plus button in the subject section of the left menu. In the New subject screen (see Figure 1.8), press the *Create SubjectID* button to create a new BIRN ID for your subject. Optionally, you can also provide a name and/or a birth date.

1.2.2 Maintaining an existing subject

To maintain an existing subject, press the magnifying glass button in the subject section of the left menu to arrive to subject find/select screen (see Figure 1.5) and doubleclick on the subject ID in the *Select a Subject* list, to go to the Subject Management screen (See Figure 1.10)

1.2.2.1 Adding a new visit

In the subject management screen (see Figure 1.10), press the *New Visit* button. In the *Visit Management* screen (see Figure 1.11), provide the mandatory *Visit Date*, *Visit Time*, *Segment Date*, *Segment Time* and *Protocol* values. The *Visit Date* and *Segment Date* must be the same, violation of this will result in a validation error. The *Name* field is added in the last BIRN schema change and related to addition of study concept between visit and segment concept. Since the study concept semantics are not fully implemented, you can leave it blank for the time being. Then, click the *Add* button.

1.2.2.2 Editing an existing visit

In the subject management screen (see Figure 1.10), from the *Visit Date* dropdown list select the visit you want to edit and press the *Edit* button. Now, you should see the Visit Management screen (see Figure 1.12, where you edit the visit parameters. Press the *Update* button when done.

1.2.2.3 Adding a new segment

In the subject management screen (see Figure 1.10), press the *Manage* button in the *Segments* section, to arrive to the subject segment management screen (see Figure 1.13). Here press the *New Segment* button. In the Segment Management screen, change the default value for the mandatory *Time* value to match the time of the visit segment you want to add, Change the protocol, and (optionally) provide a name and a description and press *Add Segment* button.

1.2.2.4 Editing an existing segment

In the subject management screen (see Figure 1.10), press the *Manage* button in the *Segments* section, to arrive to the subject segment management screen (see Figure 1.13). Here, press the *Edit* button in the *Segments* section to arrive to the Segment Edit screen (See Figure 1.15), where you can edit the parameters of the segment and press the *Edit* button to make the changes permanent.

Chapter 2

A walkthrough example

2.1 Preparing a new subject

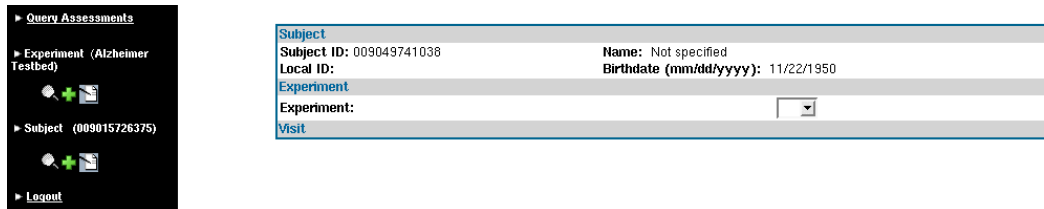

- Create a new subject (see Figure 1.8).
- After new subject addition (see Figure 2.1), the subject will not be associated to any experiment. The next step will be to enroll the new subject to an experiment.
- To enroll the subject, first click on the magnifying glass button in the Experiment section of the left menu and then doubleclick on the experiment name you want the subject enrolled. You will see a screen like in Figure 2.2), where you need to press the *Enroll* button.
- In the subject enrollment screen (see Figure 2.3), select the newly created subject from the available subjects list, then select the study group the subject will be in and press *Enroll* button.
- In the experiment management screen (see Figure 2.4), you will see the subject in the *Enrolled Subjects* list.
- The next step is to have a visit and a segment for the newly enrolled subject. You either directly jump to the subject visit management screen by doubleclicking on the subject ID in the *Enrolled Subjects* list or click on the magnifying glass button in the Subject section of the left menu, and doubleclick on the subject ID in the *Select a Subject* list (see Figure 2.5).
- In the subject management screen (see Figure 2.6), press the *New Visit* button.
- In the *Visit Management* screen (see Figure 2.7), provide the mandatory *Visit Date*, *Visit Time*, *Segment Date*, *Segment Time* and *Protocol* values. The *Visit Date* and *Segment Date* must be the same, violation of this will result in a validation error. The *Name* field is added in the last BIRN schema change and related to addition of study concept between visit and segment concept. Since the study concept semantics are not fully implemented, you can leave it blank for the time being. Then, click the *Add* button.
- After that, you will see the first visit and its first segment for the newly created subject in the subject management screen (see Figure 2.8). Now, you are ready for adding clinical assessments to visit segments.

2.2 Adding a clinical assessment to the new subject

- Once you have a visit and a segment, Press *Manage* button in the subject management screen (see Figure 2.8), to go to the Segment Management screen (see Figure 2.9), where besides editing existing segments, adding new segments, you can also add new assessments done at the particular segment of the clinical (or sometimes scan) visit. Also from this screen you can edit existing clinical assessments. To add a new assessment, select the assessment type you want from the dropdown list just before the *Add Assessment* button and press the *Add Assessment* button
- You will arrive to the cover page of the selected assessment (see Figure 2.10) In this page there are always be 5 mandatory fields, namely;
 - Date - the date, in mm/dd/yyyy format, the assessment is done (which is same as the date of the segment).
 - Time - the time, in hh:mm military time format i.e. 13:45 and 01:45 are 12 hours apart.
 - informant ID - the BIRN ID for the informant
 - Informant Relation - the relation of the informant to the subject. Since the informant ID must be a valid BIRN ID for an entry in the database, practically you can only select *self*. The ability to correctly use other type of informant relation will not be available till a resolution how to proceed with Informant entries to the database.
 - Clinical Rater -

Once completed entering the mandatory fields and any other fields in the cover page, press the *Next* button to go to the first page of the assessment. Please note that, you can just do data entry for a few pages of an assessment and continue in a later HID web app session. After each assessment page, the data entered so far is saved to the database.

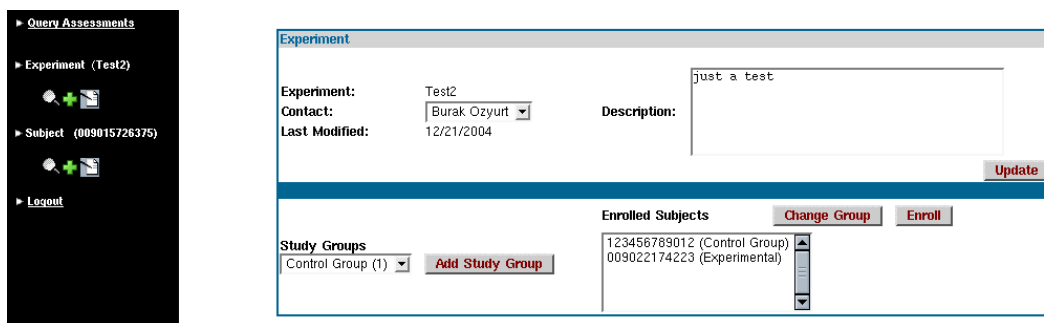

- Now, you will be in the first page of the assessment (see Figure 2.11). The assessment will be laid out very similar to the paper form of the assessment. You can navigate between pages of the assessment using the *Previous* and *Next* buttons in the bottom portion of each page.
- In case you have questions left unanswered like the question 11 in Figure 2.12, click on the small notepad icon located on the left upper corner of the question, to popup the *Notes* window where you select the reason while the question is not answered and press the *Close* button in the popup window.
- In the last page of the assessment (see Figure 2.13), you will have a *Submit* button instead of a *Next* button. Pressing this button, will save the last page to the database and show the saved results for the last page. Currently there is no visual clue after the last page is submitted.
- Once the assessment is finished, you can click the Edit (notepad like) button in the Subject section of the left menu and in the shown subject management menu select the visit you want to view from the Visit Date dropdown, press the manage button to go to the segment management screen and select the segment you have just added a new assessment from the Segment Date dropdown. You should something similar to Figure 2.14. You can start editing the assessment (if you want) by clicking the *Edit* button next to it.

The sidebar on the left shows a tree view with 'Query Assessments' expanded, containing 'Experiment (Alzheimer Testbed)', 'Subject (009015726375)', and 'Logout'. The main form displays subject information:

Subject	
Subject ID: 009049741038	Name: Not specified
Local ID:	Birthdate (mm/dd/yyyy): 11/22/1950
Experiment

Figure 2.10: Adding a new assessment - Step 2

SIMPSON ANGUS RATING SCALE			
1. GAIT			
The patient is examined as he walks into the examining room; his gait, the swing of his arms, his general posture, all form the basis for an overall score for this item. This is rated as follows:			
Normal			<input type="radio"/> 0
Diminution in swing while the patient is walking			<input checked="" type="radio"/> 1
Marked diminution in swing with obvious rigidity in the arm			<input type="radio"/> 2
Stiff gait with arms held rigidly before the abdomen.			<input type="radio"/> 3
Stooped shuffling gait with propulsion and retropulsion.			<input type="radio"/> 4
2. ARM DROPPING			
The patient and the examiner both raise their arms to shoulder height and let them fall to their sides. In a normal subject a stout slap is heard as the arms hit the sides. In the patient with extreme Parkinson's syndrome the arms fall very slowly.			
Normal, free fall with loud slap and rebound.			<input checked="" type="radio"/> 0
Fall slowed slightly with less audible contact and little rebound.			<input type="radio"/> 1
Fall slowed, no rebound			<input type="radio"/> 2
Marked slowing, no slap at all			<input type="radio"/> 3
Arms fall as though against resistance; as though through glue			<input type="radio"/> 4
3. SHOULDER SHAKING			
The subject's arms are bent at a right angle at the elbow and are taken one at a time by the examiner who grasps one hand and also clasps the other around the patient's elbow. The subject's upper arm is pushed to and fro and the humerus is externally rotated. The degree of resistance from normal to extreme rigidity is scored as follows:			
Normal			<input type="radio"/> 0
Slight stiffness and resistance.			<input type="radio"/> 1
Moderate stiffness and resistance.			<input checked="" type="radio"/> 2
Marked rigidity with difficulty in passive movement.			<input type="radio"/> 3
Extreme stiffness and rigidity with almost a frozen shoulder.			<input type="radio"/> 4
4. ELBOW RIGIDITY			
The elbow joints are separately bent at right angles and passively extended and flexed, with the subject's biceps observed and simultaneously palpated. The resistance to this procedure is rated. (The presence of cogwheel rigidity is noted separately.) Scoring is from 0 to 4, as in the Shoulder Shaking test.			
Normal			<input type="radio"/> 0
Slight stiffness and resistance.			<input checked="" type="radio"/> 1
Moderate stiffness and resistance.			<input type="radio"/> 2
Marked rigidity with difficulty in passive movement.			<input type="radio"/> 3
Extreme stiffness and rigidity with almost a frozen shoulder.			<input type="radio"/> 4
5. COGWHEELING			
Cogwheeling is directly felt while each major joint of the upper extremity is being moved in flexion/extension, and pronation/supination.			
	<u>Not Present</u>	<u>Very Mild/Que</u>	<u>Definitely Present</u>
<input type="checkbox"/> Right	<input checked="" type="radio"/> 0	<input type="radio"/> 1	<input type="radio"/> 2
<input type="checkbox"/> Left	<input type="radio"/> 0	<input checked="" type="radio"/> 1	<input type="radio"/> 2
<input type="checkbox"/> Overall	<input type="radio"/> 0	<input checked="" type="radio"/> 1	<input type="radio"/> 2
		Previous	Next

7. FIXATION OF POSITION OR WRIST RIGIDITY

The wrist is held in one hand and the fingers held by the examiner's other hand, with the wrist moved to extension flexion and both ulnar and radial deviation. The resistance to this procedure is rated as in items 3 and 4.

	Normal	Slight Rigid	Mod Rigid	Mark Rigid	Extrm Rigid
Right	0	1	2	3	4
Left	0	1	2	3	4
Overall	0	1	2	3	4

8. LEG PENDULOUSNESS

The patient sits on a table with his legs hanging down and swinging free. The ankle is grasped by the examiner and raised until the knee is partially extended. It is then allowed to fall. The resistance to falling and the lack of swinging form the basis for the score on this item:

The legs swing freely	0
Slight diminution in the swing of the legs.	1
Moderate resistance to swing.	2
Marked resistance and damping of swing.	3
Complete absence of swing.	4

9. HEAD DROPPING

The patient lies on a well-padded examining table and his head is raised by the examiner's hand. The hand is then withdrawn and the head allowed to drop. In the normal subject the head will fall upon the table. The movement is delayed in extrapyramidal system disorder, and in extreme Parkinsonism it is absent. The neck muscles are rigid and the head does not reach the examining table. Scoring is as follows:

The head falls completely, with a good thump as it hits the table.	0
Slight slowing in fall, mainly noted by lack of slap as head meets the table.	1
Moderate slowing in the fall, quite noticeable to the eye.	2
Head falls stiffly and slowly.	3
Head does not reach examining table.	4

10. GLABELLA TAP

Subject is told to open his eyes wide and not to blink. The glabella region is tapped at a steady, rapid speed. The number of times patient blinks in succession is noted:

0 to 5 blinks	0
6 to 10 blinks	1
11 to 15 blinks	2
16 to 20 blinks	3
21 or more blinks	4

16. ADDENDUM ACUTE DYSTONIC REACTION

No	0
Yes	1

17. COOPERATIVENESS

Extent of patient's cooperativeness for the entire examination forms the basis for this rating. Apparent inability to understand or comply with instructions (e. g., to relax arms) in an otherwise cooperative patient should not be rated as uncooperative.

Cooperative	0
Some resistance but complies with procedures.	1
Uncooperative: examination completed with considerable difficulty, or one or two procedures could not be completed.	2
Very uncooperative, several procedures could not be completed.	3

Chapter 3

HID Web App Management/Configuration

As of version 2.1, HID web app has a web based user/database management and application configuration functionality. This functionality is only available for the admin user of the primary database connected. When operating under federated mode, HID web application will be connected to more than one database for mediated queries. It can also be used to manage more than one database. In both cases, one of the databases acts as the primary (default) database. For each configured database, there is mandatory web user named 'admin'. The admin web users of databases other than the primary database can update clinical data but they cannot manage users, databases and configure the web application. When the admin webuser of the primary database logs in to the HID web app primary database, she will see additional two options on the left menu (see Figure 3.1). Clicking the *Configuration* link, shows the User/Database management panel (see Figure 3.2). In this panel, new web users can be added, their privileges and passwords can be changed or removed. Also, new databases can be added or removed from the HID web app at runtime. For many panels and buttons context sensitive help is available by clicking on the question mark icons.

To add a new database for multisite queries, click the add button, next to the *Database* dropdown to arrive to the *Database Configuration* screen (see Figure 3.3). In this example, parameters for Duke's FBIRN Oracle database is provided. All the available sites shown in the dropdown are read from the *nc_site* table of the primary HID. The database id provided must be unique within all configured databases. After pressing *Add* button, you will arrive at the User/Database management panel for Duke (see Figure 3.4). You need to add a new database user to be able to connect the the newly added database (Duke's in this case). By clicking on the *Add New Database User* button, you will arrive at the *User Configuration* screen (see Figure 3.5), where you will enter the database user name and password. It is a good idea to test the database connection before adding the database user to the system. This can be accomplished by pressing *Test Connection* button. If the connection is successful, you will see a screen like in Figure 3.6. After this, click the *Add* button to add the database user to the system. The system will, in addition, create the mandatory 'admin' web user with the default password 'admin', which you should change immediately. The newly added database user and the mandatory admin user is shown in the Database/User Configuration panel in Figure 3.7. Here you can change the admin web user password by clicking on the *Edit* button. New web application users can be added by clicking on the *Add New User* button. Adding and removing privileges for the web application users are also managed in this panel. Here the admin web user for the secondary database *duke.fbirn* has *manageExperiment* and *manageSubject* privileges. The *admin* privilege is not available for secondary databases.

As of version 2.2, to be able to use GridFTP resources to download/preview image data, web

users need to use GSI for authentication. As shown in Figure 3.8, when creating a new web user, to enable GSI authentication, just check the checkbox named 'Use Globus Security Infrastructure'.

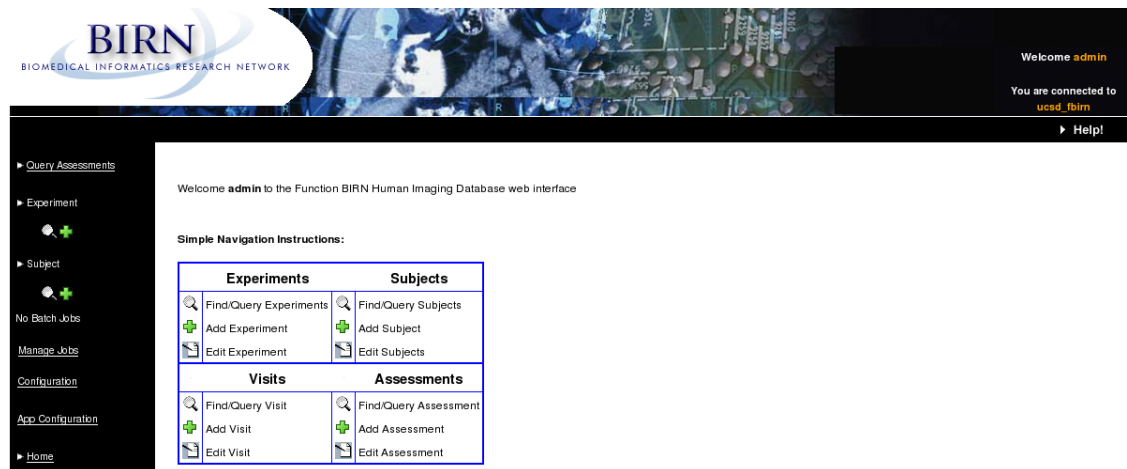

Figure 3.1: Primary db admin user main view

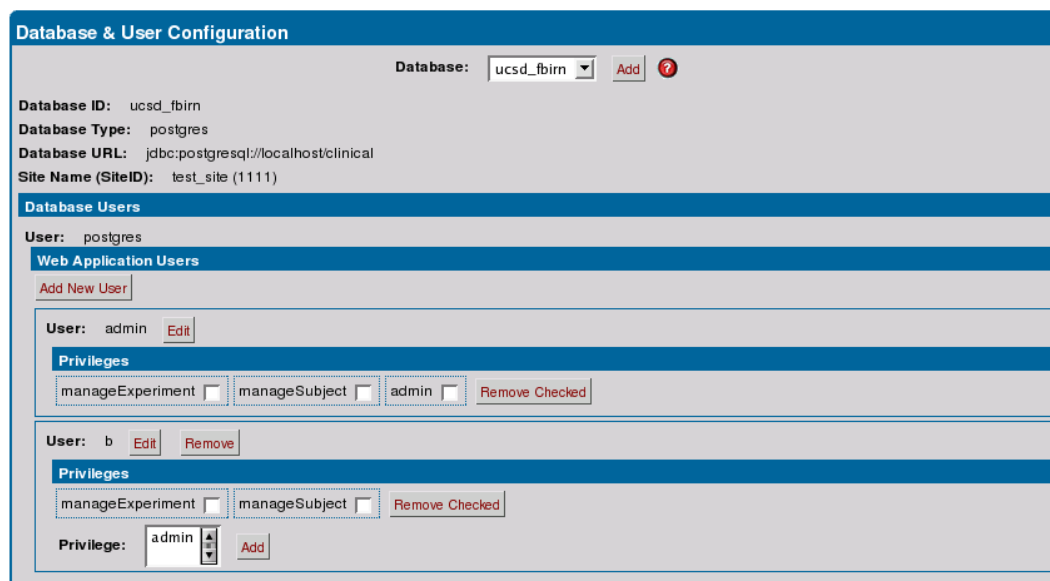

Figure 3.2: Database/User Management Panel

3.1 Web App Configuration

During the initial compilation and deployment, HID web application is setup with default parameters which are good enough for basic HID web app usage. This parameters can be changed by using the configuration panels. This functionality is also only available for the admin user of the primary database connected. By clicking on the *App Configuration* link on the left menu (see Figure 3.1),

Figure 3.3: Database Configuration

Figure 3.4: Database/User Management Pane for newly added DB

the admin user will arrive at the application configuration panels organized into four tabs named *General*, *Mediation*, *Web Services* and *Advanced*.

In the *General* tab (see Figure 3.9), there is only one parameter, namely *Download Cache Root*. The default for this parameter is *\$HOME/download.cache*, where *\$HOME* is the home directory of the user the HID web app is deployed under. This parameter corresponds to the local cache directory for image download scheduler and needs to be accessible from the deployed HID web application.

In the *Mediator* tab (see Figure 3.10), there are three configuration parameters affecting mediated (federated) operation.

- Query Only Operation - for mediated queries, the mediator user does not own the schema and can not modify database, hence unless the associated database schema name for the mediator DB user is provided in this tab, you need to check this checkbox to make the whole application query only if your HID web application is connected to multiple databases via non-schema owning database users like the mediator user used in FBIRN.
- Mediator Mapping File - This path is relative to the deployment. An ontology based lookup for common assessment terms is approximated by this simple mapping file. This parameter is currently not used.
- Mediator Schema Name - The schema named the mediator user is associated with. If the mediator user is not the DB schema owner, the metadata associated from the actual DB schema cannot be queried without explicitly specifying the schema name. HID web app relies on DB schema metadata info for dynamic queries and metadata driven operation.

In the *Web Services* tab(see Figure 3.11) , there is only one parameter, namely, *DB ID for Web Services*. This parameter must be set for HID web services to function properly. Set this parameter to the database ID for the primary database (the site hosting the HID web app). For example for UCSD the value would be *ucsd_fbirm*.

The screenshot shows a web form titled "User Configuration". It contains three input fields: "Database User Name" with the value "fBIRN_mediator", "Database User Password" with masked characters "*****", and "Database User Password (Confirm)" also with masked characters "*****". Below these fields are two buttons: "Test Connection" and "Add".

Figure 3.5: New Database User

This screenshot shows the same "User Configuration" form as Figure 3.5, but after a successful connection test. The "Test Connection" button is now disabled and greyed out. A message "Connection Test was successful!" is displayed next to it. The "Add" button remains visible.

Figure 3.6: After Successful Connection Test

In the *Advanced* tab (see Figure 3.12), more advanced configuration parameters are collected.

- **Public Mode Login** - If checked, read only public mode login is enabled. The user needs to enter her email address only in that case. Public mode operation is only advised if HID web app is used to serve public data as in the case of FBIRN BDR. Currently, once Public mode login is selected, the web based database/user and application configuration is not available. This will be fixed in the next release.
- **Check DB Schema Version** - Toggles primary HID instance database schema version checking (default is true for version checking). If the database schema and the current version of the HID web application are not compatible no user login is allowed till the database schema and contents are updated.
- **Email Host** - mail server (e.g. smtp.ucsd.edu) for job status including download jobs) notification. All four parameters (email host, email user, email password and email sender) must be specified for notification process to be activated.
- **Email User** - User name for the email account used for notification.
- **Email Password** - Password for the email account used for notification.
- **Email Sender** - The notification email will be from this user (e.g iozyurt@ucsd.edu)
- **Default Storage Type** - The default storage type for image data download and uploads. It can be a mounted file system accessible by the web server, a GridFTP server or SRB. This setting is currently not used and will be removed in future releases.
- **Enable Globus Security Infrastructure** - needs to be enabled if GridFTP is used for image data storage (either at the primary local site or any other sites in federation)
- **Primary Myproxy server host** - The default is OK for FBIRN purposes.
- **Primary Myproxy server port** - The default is OK for FBIRN purposes.

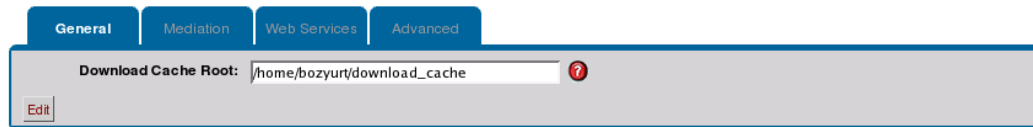

The screenshot shows the 'Database & User Configuration' page. At the top, there's a 'Database' dropdown set to 'duke_fbirm' with 'Add', 'Remove', and a help icon buttons. Below this, the configuration details are listed: Database ID: duke_fbirm, Database Type: oracle, Database URL: jdbc:oracle:thin:@duke-biac-gpop.nbirm.net:1521:hidprd, and Site Name (SiteID): Duke (0003). A 'Database Users' section follows, showing 'User: fBIRN_mediator'. Below that is the 'Web Application Users' section with an 'Add New User' button. The 'User: admin' entry is shown with an 'Edit' button. The 'Privileges' section for the 'admin' user shows 'manageExperiment' and 'manageSubject' checkboxes, both of which are unchecked, and a 'Remove Checked' button.

Figure 3.7: After New Database User Addition

The screenshot shows the 'User Configuration' page. It has fields for 'Web User Name' (filled with 'bozyurt'), 'Web User Password' (masked with asterisks), and 'Web User Password (Confirm)' (also masked). There is a checked checkbox for 'Use Globus Security Infrastructure'. Below these is a 'Database User' dropdown set to 'postgres' and an 'Add' button.

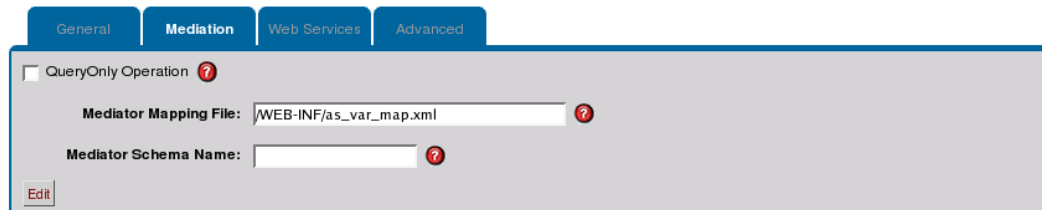

Figure 3.8: Adding a New Web User

- Master Site GridFTP server host - Needs to be specified by the admin before any GridFTP downloads/ structural image series previews via the web app.
- GridFTP server port - The default is OK for FBIRN purposes.
- RLS server URL - The default is OK for FBIRN purposes. (URL for Remote Location Service to identify physical GridFTP locations for image downloads).

The General Configuration Tab shows a single configuration field: "Download Cache Root:" with a text input containing "/home/bozyurt/download_cache". To the left of the input is a small "Edit" button. To the right of the input is a red circle with a question mark. The tab is part of a larger interface with four tabs: "General", "Mediation", "Web Services", and "Advanced".

Figure 3.9: General Configuration Tab

The Mediation Configuration Tab shows three configuration fields: "QueryOnly Operation" (a checkbox), "Mediator Mapping File:" (a text input containing "/WEB-INF/as_var_map.xml"), and "Mediator Schema Name:" (a text input). Each field has a red circle with a question mark to its right. There is an "Edit" button to the left of the "Mediator Schema Name" field. The tab is part of a larger interface with four tabs: "General", "Mediation", "Web Services", and "Advanced".

Figure 3.10: Mediation Configuration Tab

The Web Services Configuration Tab shows a single configuration field: "DB ID for Web Services:" with a text input containing "ucsd_fbirm". To the left of the input is a small "Edit" button. To the right of the input is a red circle with a question mark. The tab is part of a larger interface with four tabs: "General", "Mediation", "Web Services", and "Advanced".
